Genitals

- breasts
- vagina
- vulva
- nipples
- penis
- scrotum
- testicles

It is important to know the correct scientific vocabulary for private body parts because:

- It helps us talk about our bodies confidently.
- It helps us to understand our bodies better.
- It helps stop people from feeling embarrassed.
- It means everyone is using the same words so they can understand which body parts are being talked about.

During **sexual intercourse,** sperm is released into the vagina.

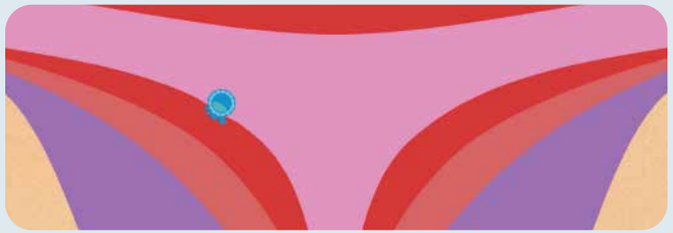

The **sperm** travel through the womb towards an egg.

If a **sperm** joins with an egg, the egg is fertilised.

The fertilised egg starts to divide and grow.

The fertilised egg moves to the womb and starts to grow into a baby. This is called **conception**.

The baby grows from an embryo into a foetus. After about nine months, the baby is ready to be born.

A baby is usually born through the vagina or by caesarean section (an operation).

Pregnant means when a baby is growing inside a female's uterus (womb).

1 month
(weeks 1-4)

3 months
(weeks 9-12)

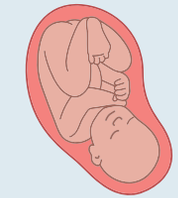

5 months
(weeks 17-20)

6 months
(weeks 21-24)

7 months
(weeks 25-28)

9 months
(weeks 33-40)

- In the UK, the legal age for sexual intercourse is 16.
- Many people choose to wait until they are older.
- This is called the age of consent.
- This rule is there to keep you safe.

Consent means clear permission given freely.

Yes, that's fine with me!

No, I don't want to do that.

Families can be formed through:

- Sexual intercourse.
- Sperm and egg donors.
- IVF.
- Surrogacy.
- Adoption.
- Fostering.
- Blending two families into one.

Parents and carers need to give their children lots of care and attention.

love and comfort
